About this Assessment

- There are **three** tasks in this assessment. You must complete **all three** tasks.
- You will need access to your organisation's policies and procedures document(s) on the use of digital devices and tools. If you do not have access to these documents, ask your assessor for help.
- This is an open book assessment. However, all answers must be in your own words. Where appropriate, you may quote from your organisation's policies and procedures document(s). However, if you do so, make sure you clearly indicate the source of the quote (ie where the quote comes from).
- Practical tasks must be completed without help from any other person.
- It is recommended that you have already completed Unit 32975, Use digital tools securely, safely, ethically and legally, or are able to demonstrate equivalent knowledge.

Important Note for Assessors

Before giving the assessment to learners, the assessor must refer to the Important Note for Assessors and Guidance Information given at the end of this document. **This note includes important information for items which need to be prepared before the assessment is given to students.**

Learner Declaration

I confirm that I have read and understood the conditions of this assessment, and have had the opportunity to get any clarification that I need from my assessor. Any health and safety requirements that I must observe have been outlined. I confirm that all work completed for this assessment is my own and has been produced without assistance from anyone else. Finally, I confirm that the process by which I may seek a review of the marking for this assessment has been outlined to me.

Signed: _____ (learner) Date: _____

Assessment Task 1: Risks

Outcome 1, PC 1.1, 1.2

What you need to do

In this task, you need to identify and describe risks and compliance requirements related to using digital devices and information in an organisation.

There are **two parts** to this task. You must complete **both parts**.

Date Due:	If this assessment task is due on a specified date, please indicate it here.

Answer the questions below. You will need access to your organisation's policies or procedures. If you do not have that access, answer from the standpoint of good practice. Where applicable and available, consider internal policies such as access control and acceptable use.

Include any relevant legislation or regulations in your answers.

When considering your answers, include the following:

- the use of digital tools
- transmission (sharing) and storage of data

NOTE: If you need additional space for your answers, use a separate sheet of paper with your name, NSN number, and the unit standard number (**29794**) clearly indicated.

Continued on next page...

NOTE regarding your organisation's compliance:

1. You do not need to describe each compliance requirement in detail. Just give an overview of the requirements.
2. Where relevant, you may quote from your organisation's policies and procedures document(s). However, if you do so, make sure you correctly reference the source of the quote. You must also make sure you do not compromise the organisation's security and confidentiality.
3. Where possible, provide a copy of your organisation's requirements when you submit evidence for this part of the assessment task.
4. If your organisation does not have documented policies and procedures related to digital tools and data, find out from your supervisor, manager, or tutor what these policies and procedures are. In your answer, you may quote your supervisor, manager, or tutor when referring to the policies and procedures. For example, "My manager told me that in this organisation we do the following to protect stored data …".
5. If you need additional space for your answers, use a separate sheet of paper with your name, NSN number, and the unit standard number (**29794**) clearly indicated.

Privacy and security

What is meant by security in terms of data storage and transmission?

What legislation and/or regulations apply to the privacy of an individuals data that may be stored or transmitted by an organisation.

What are the risks to digital security and privacy in relation to digital devices and information that an organisation may face? (Consider device use and storage and transmission of information).

What are the implications for the organisation with regards to its data, systems and processes?

Continued on next page...

INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

How does your organisation comply with data security and privacy requirements? Where available, consider policies such as access control and acceptable use.

Copyright

Describe what is meant by copyright. Include any relevant legislation or regulations in your answer.

What are some possible issues relating to copyright that an organisation may face?

What are the implications for the organisation with regards to its data, systems and processes?

How does your organisation comply with issues related to copyright? Where available, consider policies such as acceptable use.

Spamming

What is spamming?

What is the applicable legislation?

How does your organisation comply with this legislation?

Software licencing

What legislation does an organisation have to follow with regards to the software that they use?

How does your organisation ensure they are using software within the terms of the licence?

Assessment Task 2: Security

Outcome 2, PC 2.1 and PC 2.2

What you need to do

In this task you need to demonstrate that, in the context of using digital tools, you:

- understand the procedures to address security and privacy risks
- are able to use security solutions

There are **two parts** to this task. You must complete **both parts**.

Date Due:	If this assessment task is due on a specified date, please indicate it here.

Part 1: Procedures to address security and privacy risks [PC 2.1]

The table that follows on the next page lists several common security and privacy risks related to using digital tools. For each of the risks listed:

- briefly describe the risk
- explain procedures that can be used to address these risks and meet **good practice** requirements in **your** organisation.

Good practice refers to practices to protect and secure digital tools and information. This includes selecting and using the appropriate feature or function to ensure the safe and correct use of the chosen digital tools.

Your answer must include an explanation of the **impact** these procedures may have on end users when they use digital tools.

NOTE: If you need additional space for your answers, use a separate sheet of paper with your name, NSN number, and the unit standard number (**29794**) clearly indicated.

Assessor's note: Instead of answering on the table, learners may create a presentation, report or project. Whichever method is chosen, ensure that all aspects of the task are covered.

Part 2: Use security solutions [PC2.2]

In this part, you need to apply security solutions to ensure that all end user security requirements are met when using digital tools.

This must be done in keeping with:

- all the requirements of **your** organisation (ie **organisational procedures**)
- **good practice** (ie selecting and using the appropriate feature or function to ensure the safe and correct use of the chosen digital tools when securing and protecting digital tools and data).

To do this, you need to provide evidence of your ability to use the following security solutions:

- **Maintaining security measures.** For example:
  - ⇨ logging off when not using the digital tool
  - ⇨ shutting down the digital device (eg at the end of the work day)
  - ⇨ using physical security
  - ⇨ locking your device
  - ⇨ using passwords or some other form of access control
  - ⇨ saving files as read-only
- **Updates:** Ensuring all software, including operating system and anti-malware software, are updated as soon as possible.
- **Anti-malware solutions:** For example, using:
  - ⇨ anti-malware software
  - ⇨ firewalls
  - ⇨ browser settings
  - ⇨ personal network protection.
- **Data protection:** This could include:
  - ⇨ making regular and automatic backups of data
  - ⇨ saving your work regularly
  - ⇨ using a UPS or surge protector

You need to provide evidence that you have done the above. This could be in the form of:

- screenshots
- copies of files (eg showing a file as read-only, password protected, etc)
- showing your assessor how you have implemented a specific security solution (eg show your assessor how you have set up your anti-malware software, a firewall, etc)
- asking your assessor to observe you as you use a specific security solution (eg logging off, locking your device, etc)

Your assessor will use the Assessor Checklist on the next page to ensure you have met all the requirements of this task.

NOTE: You can gather evidence over time from a range of different situations including, for example, the use of digital tools to complete another Unit Standard; the use of digital tools to complete work for an organisation, etc.

Assessor Checklist

Tick each item the learner has demonstrated or for which they have provided evidence of completion.

NOTE: Evidence may be gathered over time from a range of different situations including, for example, the use of digital tools to complete another Unit Standard; the use of digital tools to complete work for an organisation, etc.

Item	✓
1. The learner **maintained security measures** in order to meet the organisation's end user security requirements when using digital tools. Tick all of the following that have been demonstrated.	
• logging off	
• shutting down	
• physical security	
• locking device	
• password protection or other form of access control	
• saving files as read-only	
• other (please specify) _____	
2. The learner ensured the following were updated, as necessary, in keeping with organisational requirements. Tick all that were demonstrated.	
• operating system	
• anti-malware	
• other (please specify) _____	
3. The learner applied the following anti-malware solutions, in keeping with organisational requirements. Tick all that were demonstrated.	
• anti-malware software	
• firewalls	
• browser settings	
• personal network protection	
• other (please specify) _____	

Continued on next page...

4. The learner applied the following data protection solutions, in keeping with organisational requirements. Tick all that were demonstrated.	
• making regular and automatic backups of data	
• saving work regularly	
• using a UPS or surge protector	
• other (please specify) _____	
5. All of the above security solutions (items 1 to 4) were demonstrated in keeping with **good practice** (ie learner selected and used the appropriate feature/function to ensure the safe and correct use of the chosen digital tools)	
6. All of the above were either observed by the assessor (or verifier), or suitable evidence was supplied (eg screenshots, copies of files with access restrictions, etc).	
Assessor Comments (eg give examples of how good practice was applied by learner, etc).	

Assessor's Attestation

I confirm the candidate identified on this checklist performed the tasks described in this checklist and attest that this is a true and accurate record of the candidate's performance.

Assessor's name:	**Date:**
Assessor's signature:	

Assessment Task 3: Health and Safety

Outcome 1, PC 1.2, 1.3; Outcome 2, PC 2.3

What you need to do

In this task, you need to demonstrate that, in the context of using digital tools, you can do the following:

- Identify and describe potential health and safety hazards.
- Describe the procedures and solutions to address these potential health and safety hazards.
- Implement these procedures and solutions.

There are **three parts** to this task. You must complete **all parts**.

Date Due:	If this assessment task is due on a specified date, please indicate it here.

Part 1: Health and safety compliance [PC 1.2]

What legislation does an organisation have to comply with when considering health and safety using digital tools?

Briefly describe how your organisation complies with this Act in the context of digital tools.

Part 2: Health and safety hazards [PC 1.3, 2.3]

There are several health and safety hazards related to using digital tools.

In this part, you need to identify and describe **at least five**.

In the space on the following pages, identify **at least five** potential health and safety hazards when using digital tools.

When identifying potential hazards, consider the following:

- Your workload and workflow
- The work environment (noise, lighting, air quality etc)
- Your furniture and equipment

For each hazard:

- describe the hazard in terms of how they could affect someone's personal health and wellbeing.
- describe at least one procedure or solution that could be implemented to prevent harm.

You can use examples to support your descriptions.

NOTE: If you need additional space for your answers, use a separate sheet of paper with your name, NSN number, and the unit standard number (**29794**) clearly indicated.

Health and Safety Hazard 1

Continued on next page...

Health and Safety Hazard 2

Continued on next page...

Health and Safety Hazard 3

Continued on next page...

Health and Safety Hazard 4

Continued on next page...

Health and Safety Hazard 5

Continued on next page...

Part 3: Use health and safety procedures and solutions [PC 2.3]

In this part, you need to implement at least three **safe work practices** when using digital tools that you identified in Part 2. These practices must:

- support health and wellbeing
- prevent harm to yourself or others

Note: 'Harm' could be in the form of physical discomfort, pain or injury; visual discomfort; stress; and/or fatigue.

For each practice or solution, identify the hazard(s) it is meant to address. You must implement at least three practices.

You need to provide evidence that you have done the above. This could be in the form of:

- screenshots
- photographs (eg of how you have arranged your workstation)
- asking your assessor to observe you as you use a digital tool

Your assessor will use the Assessor Checklist that follows to ensure you have met all the requirements of this task.

NOTE: You can gather evidence over time from a range of different situations including, for example, the use of digital tools to complete another Unit Standard; the use of digital tools to complete work for an organisation, etc.

Assessor Checklist

Tick each item the learner has demonstrated or for which they have provided evidence of completion.

NOTE: Evidence may be gathered over time from a range of different situations including, for example, the use of digital tools to complete another Unit Standard; the use of digital tools to complete work for an organisation, etc.

Item	✓
1. The learner demonstrated the following **safe work practice:**	
Hazard(s) addressed	
Assessor Comments (eg give examples of how ***safe work practices*** were applied by learner, etc).	
2. The learner demonstrated the following **safe work practice:**	
Hazard(s) addressed	
Assessor Comments (eg give examples of how ***safe work practices*** were applied by learner, etc).	

Continued on next page...

Item	✓
3. The learner demonstrated the following **safe work practice:**	
Hazard(s) addressed	
Assessor Comments (eg give examples of how ***safe work practices*** were applied by learner, etc).	

Assessor's Attestation

I confirm the candidate identified on this checklist performed the tasks described in this checklist and attest that this is a true and accurate record of the candidate's performance.

Assessor's name:	**Date:**

END OF ASSESSMENT TASK

Assessment Schedule for Unit 29794v2a

Describe and implement security solutions when using digital tools Level 3 Credit 5

Name	Date
Course	NSN No.

Performance Criteria	Evidence Statement (what the assessor looks for)	Judgement Statement (how well or how many)	✓
Outcome 1: Identify and describe risks and compliance requirements when using digital devices and digitally stored and transmitted information in an organisation context. *Range: compliance refers to legislation and regulations that include but are not limited to – privacy, health and safety, copyright, spamming, software licencing; may include internal policies such as access control, acceptable use policy.*			
1.1 Legal and regulatory risks are identified and described in terms of their implications for data, systems and organisational processes. *Range: includes but is not limited to – security risks, privacy risks, copyright.*	Assessment Task 1, Part 1 [See sample answers provided in the Assessment Sample Answers document]	The learner correctly identified the following legal and regulatory risks in terms of their implications for data, systems, and organisational processes. • security • Privacy • Copyright	
1.2 Organisational compliance requirements are identified and described in terms of using digital tools, and the transmission and storage of data.	Assessment Task 1, Part 1 Assessment Task 3 Part 1 [See sample answers provided in the Assessment Sample Answers document]	The learner correctly identified and described the compliance requirements of their organisation in terms of the: • use of digital tools • transmission (sharing) and storage of data. This must include: • Security • Privacy • Copyright • Spamming • Software licencing • Health and safety Where relevant, the learner may have included the following internal policies in their description: • Access control • Acceptable use policy	

2a © Instant Education Solutions Ltd www.instant.org.nz

Performance Criteria	Evidence Statement (what the assessor looks for)	Judgement Statement (how well or how many)	✓
1.3 Potential health and safety hazards associated with the use of digital tools are identified and described in terms of personal health, wellbeing and prevention of harm. *Range: minimum of five potential health and safety hazards.* **GI 4:** Health and safety hazards refer to physical and mental discomfort, pain or injury; visual discomfort; stress; fatigue; potential injury or harm from furniture (e.g. desks and chairs); environment (e.g. light, noise, temperature and air quality); placement of digital device components (e.g. mouse, keyboard, screen).	Assessment Task 3, Part Part 2 [See sample answers provided in the Assessment Sample Answers document	The learner correctly identified and described the following: • At least three health risks. • At least three safety issues. The learner's identification and description of the above was given in terms of: • personal health and wellbeing. • the prevention of harm to themselves or others.	
Outcome 2: Explain procedures and implement solutions to meet end user security and good practice requirements when using digital tools in an organisational context.			
2.1: Procedures to address security and privacy risks and meet good practice requirements in an organisational context are explained in terms of their impact on end users when using digital tools. *Range: common security and privacy risks include but are not limited to – data interception and unauthorised access; malware; natural disaster; data corruption; hardware failure; network access.*	Assessment Task 2, Part 1 [See sample answers provided in the Assessment Sample Answers document]	The learner correctly explained procedures to: • address security and privacy risks • meet good practice requirements in an organisation context The learner's explanation was given in terms of the impact these procedures may have on end users when using digital tools. Procedures to address the following common security and privacy risks were explained: • Data interception and unauthorised access • Malware • Natural disaster • Data corruption • Hardware failure • Network access Learner must give at least one procedure and impact for each risk.	

Performance Criteria	Evidence Statement (what the assessor looks for)	Judgement Statement (how well or how many)	✓
2.2 Security solutions to meet end user security requirements in an organisational context are adopted when using digital tools. *Range: solutions include but are not limited to – maintaining security measures and updates; anti-malware solutions; demonstrating compliance with organisational procedures and good practice.* **GI 4:** Security solutions refer to practices to protect and secure digital tools and information by users such as – log-off, shut-down, physical security, anti-malware software, browser settings, firewalls; access control, locking, passwords; back-up and restore techniques; frequency of saving; virus protection facility; Uninterrupted Power Supply (UPS) or surge protector; personal network protection; read only files.	Assessment Task 2, Part 2 [See sample answers provided in the Assessment Sample Answers document]	The learner correctly adopted security solutions when using digital tools. These security solutions were adopted in order to meet end user security requirements within their organisation. The following security solutions were adopted. In keeping with their organisation's requirements, the learner maintained **security measures** such as: • logging off • shutting down • physical security • locking your device • password protection or other form of access control • saving files as read-only The learner ensured the following was **updated**, as necessary, in keeping with organisational requirements: • Operating system • Anti-malware The learner applied **anti-malware solutions**, in keeping with organisational requirements. This could include, for example: • anti-malware software • firewalls • browser settings • personal network protection The learner applied **data protection solutions**, in keeping with organisational requirements. This could include, for example: • making regular and automatic backups of data • saving work regularly • using a UPS or surge protector All of the above were demonstrated in keeping with **good practice** (ie learner selected and used the appropriate feature/function to ensure the safe and correct use of the chosen digital tools).	

Performance Criteria	Evidence Statement (what the assessor looks for)	Judgement Statement (how well or how many)	✓
2.3 Procedures and solutions to address potential health and safety hazards associated with the use of digital tools are described and implemented in terms of personal health and wellbeing and prevention of harm. *Range: includes safe work practices when using digital tools.*	Assessment Task 3, Part 2 and Part 3 [See sample answers provided in the Assessment Sample Answers document]	The learner described a solution for each identified health and safety risk in 1.3. At least three safe work practices were demonstrated to mitigate potential health and safety risks when using digital tools.	

Assessor's Comments:

Assessor's Attestation:

As assessor for this unit standard, I have ensured sufficiency of performance and knowledge by this learner. I can confirm that the assessment conditions and the actions of the learner and assessor have complied with all relevant Health and Safety requirements, in addition to any other relevant compliance requirements.

Assessor's Name: Date:

Assessor's Signature:

Position held:

Important Note:

Make sure that the Assessment document and any other sample answers or evidence are forwarded with this sample answers booklet when external moderation is called for.

Unit Standard 29794 Version 2

Describe risks and implement security solutions when using digital tools

Outcomes and Performance criteria

Outcome 1

Identify and describe risks and compliance requirements when using digital devices and digitally stored and transmitted information in an organisational context.

Range: compliance refers to legislation and regulations that include but are not limited to – privacy, health and safety, copyright, spamming, software licencing; may include internal policies such as access control, acceptable use policy.

Performance criteria

1.1 Legal and regulatory risks are identified and described in terms of their implications for data, systems and organisational processes.

Range: includes but is not limited to – security risks, privacy risks, copyright.

1.2 Organisational compliance requirements are identified and described in terms of using digital tools, and the transmission and storage of data.

1.3 Potential health and safety hazards associated with the use of digital tools are identified and described in terms of personal health, wellbeing and prevention of harm.

Range: minimum of five potential health and safety hazards.

Outcome 2

Explain procedures and implement solutions to meet end user security and good practice requirements when using digital tools in an organisational context.

2.1 Procedures to address security and privacy risks and meet good practice requirements in an organisational context are explained in terms of their impact on end users when using digital tools.

Range: common security and privacy risks include but are not limited to – data interception and unauthorised access; malware; natural disaster; data corruption; hardware failure; network access.

2.2 Security solutions to meet end user security requirements in an organisational context are adopted when using digital tools.

Range: solutions include but are not limited to – maintaining security measures and updates; anti-malware solutions; demonstrating compliance with organisational procedures and good practice.

INSTANT Education Solutions
2a © Instant Education Solutions Ltd www.instant.org.nz

2.3 Procedures and solutions to address potential health and safety hazards associated with the use of digital tools are described and implemented in terms of personal health and wellbeing and prevention of harm.

Range: includes safe work practices when using digital tools..

Guidance information

1. Recommended skills and knowledge:

   Unit 32975, Use digital tools securely, safely, ethically and legally, or demonstrate equivalent knowledge and skills.
2. Assessment, where applicable, will be conducted in and for the context of a real or realistic situation and/or setting, and be relevant to current and/or emerging practice. The assessor may gather evidence over time from a range of scenarios rather than using one assessment where the learner has to demonstrate all of the required skills.
3. The tasks must be of sufficient complexity to provide scope to meet the assessment performance criteria. The assessment context for this unit standard must be suitable to meet the criteria for level 3 in the NZQF Level Descriptors, which are available by searching for "level descriptors" at www.nzqa.govt.nz.
4. Definitions

   Anti-malware is the generic term used to describe the prevention, detection, and removal of malicious software/code such as viruses, Trojans, worms, backdoor, spyware and other harmful programs.

   Digital devices refer to electronic computing devices that can receive, store, process or send digital information, such as computers (desktop or laptop), tablets, smartphones or other emerging digital technologies.

   Digital tools refer to both hardware (storage and display devices) and software(applications and programs).

   Good practice refers to practices to protect and secure digital tools and information by users, including selecting and using the appropriate feature or function to enable the safe and correct use of the chosen digital devices and platforms.

   Health and safety hazards refer to physical and mental discomfort, pain or injury; visual discomfort; stress; fatigue; potential injury or harm from furniture (e.g. desks and chairs); environment (e.g. light, noise, temperature and air quality); placement of digital device components (e.g. mouse, keyboard, screen).

Malware refers to a type of malicious software/code that includes viruses, Trojans, worms, backdoor, spyware and other harmful programs.

Organisation refers to the context the digital tools are being operated in (e.g. businesses, clubs, not-for-profit organisations). It does not define or limit the situations in which assessment evidence may be gathered.

Requirements mean the documented policies and procedures or commonly accepted practices of a workplace, school or training provider. The learner must be given access to the policy and procedures prior to being assessed against this unit standard.

Security risks refer to the transparency and accessibility of information and maintaining basic security requirements, to prevent and minimise harm, in a home, work or study context.

Security solutions refer to practices to protect and secure digital tools and information by users such as – log-off, shut-down, physical security, anti-malware software, browser settings, firewalls; access control, locking, passwords; back-up and restore techniques; frequency of saving; virus protection facility; Uninterrupted Power Supply (UPS) or surge protector; personal network protection; read only files.

Transparency refers to visibility and openness of information.

5. Legislation relevant to this unit standard may include but is not limited to the:
   Copyright Act 1994
   Copyright (New Technologies) Amendment Act 2008
   Crimes Act 1961
   Harmful Digital Communications Act 2015
   Health and Safety at Work Act 2015
   Privacy Act 2020
   Unsolicited Electronic Messages Act 2007
   and any subsequent amendments.
   Current legislation and regulations can be accessed at http://legislation.govt.nz.
6. Reference
   ACC5637 Guidelines for Using Computers - Preventing and managing discomfort, pain and injury. Accident Compensation Corporation - Department of Labour, 2010; available from WorkSafe New Zealand, at https://www.worksafe.govt.nz/topic-andindustry/work-related-health/ergonomics/safely-using-computers-at-work/.

Important Note for Assessors

1. Before beginning this assessment, learners must be given access to their organisation's documented policies and procedures related to the use of digital tools, and the transmission and storage of data. For learners completing this assessment in a place of learning, the organisational policies and procedures of the school or training provider should be supplied. If no documented policies and procedures exist for the organisation, learners need to be made aware of the commonly accepted practices of the organisation with regards to the use of digital tools, and the transmission and storage of data. The learner will need to provide a summary of these in Assessment Task 1, and will need to apply these policies and procedures throughout the assessment.
2. You may prefer Task 1, and Task 2 Part A to be completed as a report, presentation or project.
3. A copy of the **Assessment Sample Answers** document and any other assessment evidence must be submitted with this **Assessment Booklet** when moderation is called for.
4. Where necessary and practicable, a learner may give oral responses to the questions in this assessment. If that option is exercised, the verbal answers must be recorded in the assessment booklet at the appropriate place and an attestation signed by the learner and yourself. The attestation certificate can be found at the end of the assessment tasks.
5. Good practice suggests that the verbal answers should be recorded. For more information on preparing digital submissions for moderation, refer to the NZQA website.

   This can be done using any digital audio editor which can easily be downloaded from the internet.
